Professional Experience

September 2017 - November 2023

Software Engineer III
Unicity International

- Progammed the codebase for multiple websites based in React, NodeJS, AngularJS, Python and more
- Integrated multiple CMS such as Drupal or Builder.io with custom code to provide unique experiences on each website
- Responsible for building a core application that increased sales by 15% quarterly
- Reviewed code submitted by other engineers with GitHub, analyzing and catching bugs
- Created bots using Python and integrated machine learning with them to create helpful tools for the internal company
- Maintained support and provided help on business' mobile application (React native)
- Trained other engineers on technologies and acted as a subject matter expert resource for every repository within the company
- Integrated servers within Amazon S3 (AWS) and designed the way data would be stored in their respective buckets
- Engineered websites based on the legal requirements for a given country - across Europe, Asia, Africa, North/South America, and Australia
- Interviewed other engineers and would be key in hiring decisions
- Overhauled deprecated code to be up to standards with the latest features that a framework would provide
- Integrated multiple payment types (i.e Credit Cards, Bank wire) on websites in order for business to accurately calculate totals and charge customers accordingly
- Spearheaded and architected how the companies single page checkout would be built by choosing the best technologies that would make it DRY
- Worked within an Agile environment regularly exceeding velocity
- Used RESTful APIs to provide a dynamic user experience
- Learned a completely new frontend framework and backend codebase and a new CMS all within a week
- Able to work on simultaneous projects and seamlessly move from one to another
- Consistantly communicated with other departments to get the requirements needed to complete a feature request
- Provide compelling data and visuals to stakeholders and upper management to aid in decision making of new projects
